## About SYNLawn

All SYNLawn products are proudly made in Australia by APT (Advanced Polymer Technology) Asia Pacific in Dandenong South, Melbourne. Founded in 1994, APT Asia Pacific is the leading manufacturer of synthetic turf products for sporting, recreational and landscaping applications. APT Asia Pacific is the only manufacturing plant in Australia that makes synthetic turf yarn.

APT yarns have inbuilt proprietary features not found in any other yarns. They are purpose suited to Australasian conditions, manufactured with ISO quality assurance, proven by continuous testing, and backed by a generous Warranty.

*Private residence, Jan Juc, VIC | Grass Roots Synthetic Lawns*

## Australian Manufacturer Warranty

All SYNLawn products come with a standard Manufacturer's Warranty of up to 15 years (depending on the product). Our Warranty protects customers against issues such as ultra-violet degradation and fibre loss.

We offer a simple and supportive Warranty Claim process. A claim may be lodged anytime during the Warranty period, by notifying us in writing as soon as possible. Within 15 days of notification, one of our SYNLawn representatives

will arrange a time for a joint inspection to fairly assess the claim. If the claim is approved, SYNLawn will rectify or replace any faulty product to the same or equal value.

Our Customer Service and Sales staff are available at all times to offer advice and assistance on the care and maintenance of all surfaces. Should you require more information on our Manufacturer's Warranty please contact our Customer Service team on 1300 796 529.

## UV Stabilised

SYNLawn products are specifically designed for Australian conditions. That means protecting against the harsh Australian UV rays.

Other inferior quality grasses may not provide protection against fading from intense sunlight and weathering nor might they provide a Warranty. Our premium quality yarns and surfaces all come with an up to 15 Year Warranty to protect you against UV fading, so you can feel confident that you have chosen the best synthetic grass on the market.

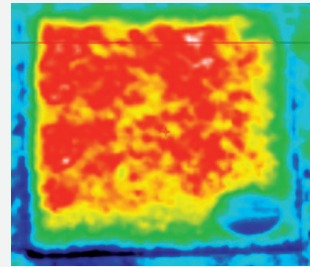

## COOLplus® Technology

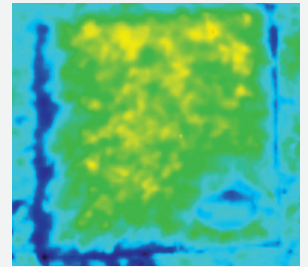

All SYNLawn artificial turfs feature our exclusive COOLplus® Technology. Scientifically proven, SYNLawn's COOLplus Technology lowers rising temperatures by reflecting sunlight, thus slowing heat build-up and emissivity.

Heat build-up occurs in most materials when thermal energy from the sun's rays hit the surface of an object. In the same way dark clothing absorbs more heat than light clothing, artificial grass can also hold in heat making it uncomfortable when it is hot outside.

However, SYNLawn's COOLplus Technology incorporates infrared reflective pigments that help slow down the heat build-up process making them up to 20% cooler than similar artificial grass products on the market.

## Australia's COOLEST Artificial Grass

### For a difference you can see and feel

Not only does SYNLawn's COOLplus Technology keep your turf cooler, it also adds a finish to each grass fibre that reduces the 'shiny' appearance, is softer to touch and less abrasive than other artificial grasses.

\* Thermal images captured with Fluke Ti20 Thermal Imager. Images are captured with calibrated temperature data in a matrix of over 12,000 discrete measurements per thermal image.

## Child-safe

All SYNLawn products are free of unsafe chemicals and are soft to touch and play on. We specialise in manufacturing and supplying artificial grass for schools, child-care centres and playgrounds.

We offer soft shock pad underlay when installing the grass for added cushioning and protection.

## Pet-Friendly

All of our products are safe and pet-friendly. They are soft under paw, non-toxic, durable and made with a strong perforated backing to allow liquid to drain through the synthetic pile.

However, our Pet Premium turf was specifically designed with your furry friends in mind. It offers double perforations in the backing for exceptional drainage and high-density tufting for ease of collecting pet waste.

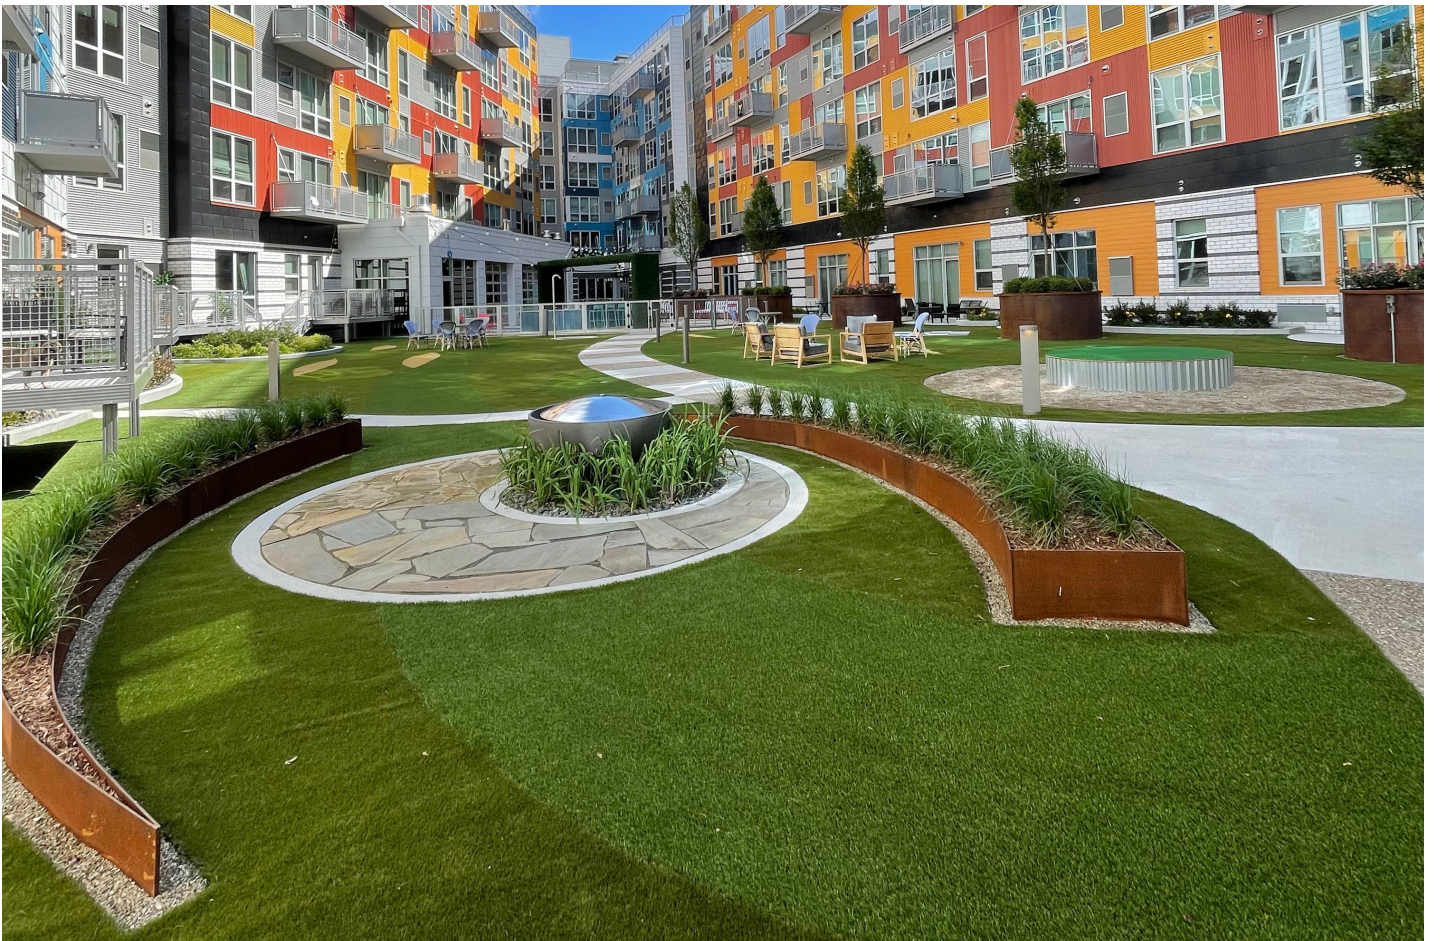

## Superior Drainage

Let it rain! Water (or any other liquid) drains right through our surfaces at a rate of 2000mm per hour.

The punch hole system on the backing of our surfaces quickly allows water to pass through the pile into the ground below reducing the occurrence of puddles, brown stains and mud.

#### KEY BENEFITS:

- Combines multi-coloured 30mm grass blades with PE monofilament and a PP texturised monofilament thatch for a more natural appearance
- Field green/olive green with green/beige thatch
- **Coolplus®** technology
- A soft touch medium weight landscaping solution
- Suitable for residential, play areas and pets
- 3.71m wide roll | 10 year Warranty

## CLASSIC SUMMER 30

SOFTNESS ★★★★★☆  
WEAR RATING ★★★★★☆

#### KEY BENEFITS:

- Combines multi-coloured 35mm grass blades with PE monofilament and a PP texturised monofilament thatch for a more natural appearance
- Field green/olive green with green/beige thatch
- **Coolplus®** technology
- A soft touch medium-heavy weight landscaping solution
- Suitable for residential, play areas, pets and light commercial
- 3.71m wide roll | 12 year Warranty

## CLASSIC SUMMER HD

## Avoid turf damage from reflective sunlight

SYNLawn artificial grass is designed to withstand our harsh Australian climate to normal surface temperatures of approximately 65-75C. If the temperature increases above melting point the turf fibres will begin to shrink and eventually disintegrate or melt completely. This can occur if sunlight is reflected off surfaces such as doors, windows, polished gutters, mirrors, reflective panels or any other surface which can reflect sunlight onto your turf.

To avoid this, we recommend not laying your turf directly up against a reflective surface by creating a 1 metre border between them. Other suggestions include (if possible) covering windows with a screen or awning and using non-reflective paint on shiny surfaces like gutters and drainpipes.

Not all reflective sunlight is avoidable, for example, if the reflection is occurring from another surface not on your property, you may need to find an alternative solution for the affected area, such as adding some plants, pebbled rocks or a pond.

An expert SYNLawn installation agent will thoroughly assess your area and identify any potential risks. We encourage you to discuss your design requirements and plans to ensure that you avoid any issues with reflective sunlight.
